

Health AV From TeleHealth Services

By integrating innovative communication solutions into everyday workflows, hospitals are increasing patient satisfaction, improving the quality of care and delighting their clinical and non-clinical employees, all while maximizing operational efficiencies. TeleHealth Services integrates a broad range of advanced audio-visual communication tools and technologies, to offer you the optimal solution to suit your needs.

TeleHealth Services and its subsidiaries employ an award-winning team of AV industry experts who have designed and integrated thousands of visual display, digital signage, wayfinding, audio and workplace communication solutions. Our solutions incorporate a broad range of technologies that empower healthcare clients to effectively communicate their message both internally and externally. Our strict focus on serving hospitals across the United States has allowed us to refine a process of design and implementation that results in the delivery of high-quality, user-friendly, reliable systems.

Collaboration Table

Collaboration Spaces

Workplace collaboration extends far beyond the cooperation of a project team or a department toward a specific goal. For healthcare workers, collaboration is an interdisciplinary approach that values knowledge sharing across clinical and often non-clinical departments while working towards a common objective. The chances for a successful outcome increase dramatically in an environment that welcomes flexibility and the rapid sharing of ideas and information.

Collaboration also improves employee morale, inspires employee loyalty, and drives clinical success. For all of these reasons, a new culture of collaboration has evolved in recent years, and hospitals like other large and diverse organizations are responding by creating dedicated collaboration spaces throughout their facilities.

TeleHealth’s design and installation experts have designed and installed collaboration spaces for large enterprises, education and healthcare facilities across the country. We leverage our experience to provide hospitals with a low-stress, affordable and predictable process for planning, designing and building the collaboration spaces you need.

Collaboration Space Solutions

Table Top Collaboration Packages

These systems are self-contained and require only a data connection and power connection. The package includes:

- A dedicated collaboration table with four or five chairs. Sometimes the table is motorized to raise and lower to assist with meeting ADA requirements.
- A medium-sized high definition monitor mounted on one end of the table
- Input ports and power ports in the table surface to connect laptops
- Capability for displaying wireless devices

These systems start at around \$4,000 but can be more based on added capabilities and the quality of the furnishings. They are typically installed by the owner.

Integrated Collaboration Packages

These systems are installed in small conference rooms or in open office environments by our audiovisual specialists. The systems include:

Integrated Collaboration Room

- A small conference table with four to seven chairs (owner furnished)
- A large wall-mounted display (60” or larger)
- Input ports and power ports in the table surface to connect laptops.
- Capability for displaying wireless devices

Integrated collaboration rooms start at about \$7,500. Larger displays and site conditions can increase the cost. Video and audio conferencing can also be added.

Enhanced Integrated Collaboration Room

- A small conference table with four to seven chairs (owner furnished)
- A large interactive display with integrated conferencing capabilities
- Input ports and power ports to connect laptops
- Capability for displaying wireless devices

Enhanced integrated collaboration systems start at about \$12,000. Larger displays and site conditions can increase the cost. Some solutions may have annual license fees attached to them.
